

RESOURCES

{ DECLARATIVE MODELING LANGUAGE }

A USER RESOURCE

```
user { 'gary':  
  ensure => present,  
  uid     => '1002',  
  gid     => '01',  
  shell   => '/bin/bash',  
  home    => '/home/gary',  
}
```

A USER RESOURCE

```
user { 'gary':  
  ensure => present,  
  uid     => '1002',  
  gid     => '01',  
  shell   => '/bin/bash',  
  home    => '/home/gary',  
}
```

- type & title must be unique for a node
- use alphanumerics & quote strings
- include a comma after last attribute - makes maintenance easier

CORE RESOURCE TYPES

BEHAVIOR

UNIQUENESS

PUPPET RESOURCE

PUPPET RESOURCE is a command line tool for inspecting resources on your system. It interacts directly with the RAL.

```
puppet resource type title
```

```
root@training:~$ puppet resource user gary
```

```
user { 'gary':  
  ensure => present,  
  uid    => '1002',  
  gid    => '01',  
  shell  => '/bin/bash',  
  home   => '/home/gary',  
}
```

PUPPET RESOURCE QUERY

Executing `puppet resource` while providing a resource type will query all known instances of that resource on the system.

```
puppet resource type
```

```
root@training:~$ puppet resource user
```
